

Shutter Pricing			
All shutters are priced by the square foot and per pair (2 individual shutters). To calculate square footage take the pair width x the length in inches and then divide by 144 (i.e. pair width of 32.50" and length of 55.5" = 1,803.75/144= 12.53 SF). Cedar shutter pricing listed below are for "raw" unfinished shutters; finishing services are available (see painting services section on this page). Endurian shutter pricing listed below are inclusive of full painting in any one of our 24 standard colors (see paint color selector card). For more information regarding shutter styles, taking dimensions, or calculating price, please refer to our Finishing Guide or call one of our Shutter Professionals at: 800.250.2221 or visit: timberlane.com			
Shutter Type & Style #	Description	Price Per Square Foot	
		Cedar	Endurian™

Shutter Options			
Below are our standard shutter options and pricing. Please refer to our Finishing Guide on pages 2-4 for availability of the desired option on the shutter style you have selected as not all options are available on all shutter styles. Customizing a Shutter to either replicate an existing shutter, or simply adding features that you want, is not as hard as it might appear. Additionally, it is virtually impossible to list all the available customizations that are available, so if you don't see what you're looking for, there is a good chance we can offer it to you and have already done it; just call one of our Shutter Professionals at: 800.250.2221 for pricing and availability or visit: timberlane.com			
Option #	Description	Price	
		Cost	UOM

Painting Services for Wood Shutters <sup>2</sup>			
<b>Primed Shutters:</b> We utilize a proprietary tannin-blocking primer, tinted to a medium gray. This provides for 100% coverage in preparation for the topcoat. Either latex or oil-based paints can be applied over our primer. Due to minor grain raise which is typical, a light sanding with a 220 grit sand paper will be required prior to adhering your topcoat. <b>Primed and Painted Shutters:</b> When you order your shutters Primed & Painted, we perform the priming process as described above, we then prepare (sand) the entire shutter to ensure a smooth surface, then we apply two coats of a waterborne top coat in the color of your choice. Choose from one of our 24 standard colors from our Paint Selector Card or send us in a color swatch or paint color code from any major paint manufacturer and we will match it exactly.			
		Primed Only:	\$3.00/SF
		Prime and Painted:	\$9.00/SF
<sup>2</sup> Endurian shutter pricing is inclusive of painting; prices shown here are for wood shutters only			
Storm Shutters			
Timberlane offers a wide selection of Storm-Rated Shutter Solutions. Due to the unique nature of these products and installations, along with other considerations pertaining to local building codes, pricing and availability is only available by contacting one of our Shutter Professionals at: 800.250.2221			
<b>Hurricane Panels:</b> These are fiberglass reinforced panels that get secured to the rear of a shutter, that used in conjunction with the appropriate hardware, offer storm protection. These panels were independently tested by National Certified Testing Laboratories, Inc and far exceeded the Standard Building Code Congress International and Dade County Florida Hurricane Building Code test protocols PA201, PA202, PA 203 and DCBCCD PA 201 (Certification No. 98-0430-01). Panels obtained an impact design pressure rating of 60 psf positive and 55 psf negative (highest tested) when mounted on twenty-four square foot closable shutter frames. This has the equivalency of wind pressure of 1,440 lbs positive and 1,320 lbs negative, respectively, over the surface of the panel area, equating to winds in excess of 216 mph.			
<b>Storm Rated Shutters:</b> Are constructed from advanced raw materials, when, if used in conjunction with appropriate storm rated hardware meet the IRC, IBC and State of Florida building codes. They additionally have been independently tested and meet the requirements of the Large Missile Impact Test (missile level D, wind zone 4*) as defined by ASTM E 1886-05 and ASTM E 1996-05 as specified in the IRC and IBC.			
Can't Find Something?			
We offer an extremely comprehensive selection of shutter styles, options, shutter hardware, and other related services. If however you are interested or want something that you do not see listed in any of our catalogs, please contact one of our Shutter Professionals at: 800.250.2221.
